5. Take the another same size bowl and close it over the first bowl.
6. Make sure both are in the same size so that the mouth of both the bowls are evenly covered.
7. Keep the bowls carefully into the ash and burry it . After 3 hrs, the clean water will appear foamy and it has a sour smell.
8. Add ½ padi wheat flour to the above mixture. Clean the bengal gram with water and use this water also to the flour and knead it well.

12. Once the amount decreases, follow the above step to prepare the sour water(by mixing water and bengal gram) and add and mix into the left out khameer.

This comes as complementary or side-dish when you mix rice with thogayal or curd. This is mostly done once in year and used for the rest of time in that year. The pickle is stable for long time because of the ingredients added such as chilli, salt, Vendhayam (Fenugreek seeds), turmeric, nalla ennai (oil), karayam, and in this salt, nalla ennai, turmeric can be added more always. If you done add more of these ingredients, the pickle won't be soft and will become black. Take out the seeds of chilli from the chilli powder and these seeds are the reason for the insects to come. The Jadi is the best option to keep the pickles. Also, pickles are kept in sand vessels and stone vessel. If you are putting the pickles in sand-vessel, you have to apply kungaliyam in the inner walls of the vessel for using and the insects won't come. The process to make the sand or rock-vessel ready for pickle is,

1) Keep a new sand vessel on stove and heat. After it is heated, pour 5 palam nalla ennai on the hot vessel (some people use candle instead of nalla ennai) . After it is boiled nicely, powder 1 palam kungaliyam and put it in the hot oil . Immediately wrap a cloth on a stick and stir the stick such a way it touches the inner walls of the vessel. Later you can use the same cloth for covering the mouth of the vessel.

By doing this, the boondi will fall into the heated ghee evenly as far as possible. Turn the boondis with another sieved ladle until it is cooked well. Remove and set aside. Then dip the other ladle into water and remove it. Again take the flour mixture and repeat the process. After all the boondis are done make them into balls or laddus.

Refer to 67th page, 37th diagram for the shape of the ladle.

You can add deskinced almonds, cleaned raisins, pepper sized crushed brown sugar. If the consistency of the flour is hard, you can loosen the flour by dipping the ladle in water and kneading the flour with that little water drops.

377 MOTICHOOR LADDOO

These laddoos are done just like the ones mentioned in 376. But the boondis are done in smaller hole ladles where the holes are more. And the flour is made like curry and should not be tight. The sugar syrup is done by 376 recipe. Fry almonds, brown sugar, raisins and ½ palam cloves in ghee and put it in the sugar syrup or boondis before making the laddoos.
